

## Glucagon/GlucaGen Emergency Kit

For low blood sugar emergency (person with diabetes is unable to swallow)

1. Add solution to power
2. Be sure all power is dissolved (roll the vial — do not shake it)
3. Carefully draw all of solution back into syringe
  - Hold bottle upside down
  - Keep needle below fluid (otherwise you will only get air)
4. Give Glucagon in most available site
  - Thigh
  - Hip (fatty area away from bone)
  - Upper arm

Glucagon may be administrated:

- Through clothing
- Without use of alcohol swab

### **Caution: roll person onto side after administrating**

- Glucagon may cause nausea and vomiting
